

## Request to post Osaka University Immunology Frontier Research Center Advanced Postdoc Program recruitment posters

The Osaka University Immunology Frontier Research Center (IFReC) has set up an Advanced Postdoc Program to employ outstanding young researchers with the aim of promoting international brain circulation and developing research in immunology and cell biology. In addition to a salary of an international standard, researchers employed under this program will be provided with research funding (3 million yen a year) to conduct their own original research.

IFReC has been highly acclaimed since it was established in 2007 as part of the Ministry of Education, Culture, Sports, Science and Technology's World Premier Research Center Program (WPI), which aims to create world-leading research centers by providing a research environment of an international standard. This year, IFReC has secured a new base of operations through support from private enterprise, and continues to progress on the basis of the WPI missions. IFReC will supply its superior research environment of an international standard and support young researchers to achieve outstanding research results in order for those young researchers to then step up into their next position creating the momentum for a virtuous cycle of brain circulation.

Therefore, we would like to ask you to assist recruitment for this Advanced Postdoc Program by hanging the poster and sharing the information. Recruitment has already started and will continue until all positions are filled. We request that the poster is hung until at least the end of March.

Shizuo Akira, Center Director  
Osaka University Immunology Research Center

Details of the Advanced Postdoc Program may be viewed at the URL below.
